

Workshop on Human Body

Concept based workshop on theme 'Human body' was conducted for B.EL.Ed. I year students on 11.09.2018. This workshop was conducted by Mr. Ashutosh Upadhyay along with two of his colleagues, associated with *Alliance for Science*. "Alliance for Science" is a nationwide science popularization initiative among primary and upper primary children. Major objective of this workshop was to provide students hands-on training in developing science models from low cost materials which are largely the waste items. The entire process used for the workshop was aimed to encourage students to inquire, explore, investigate and demonstrate their understanding of science concepts using self-created working representations.
