Our journey

Universe : A Ball of Beauty

- ❑ Theory of universe like big bang theory.
- ❑ Eras and epochs of big bang theory.
- ❑ Formation of stars & galaxies.
- ❑ Beauty and aesthetic value of changes.

- ❑ Change leads to new possibilities.
- ❑ Change gives us hope.
- ❑ Change warns us about possible outcomes.

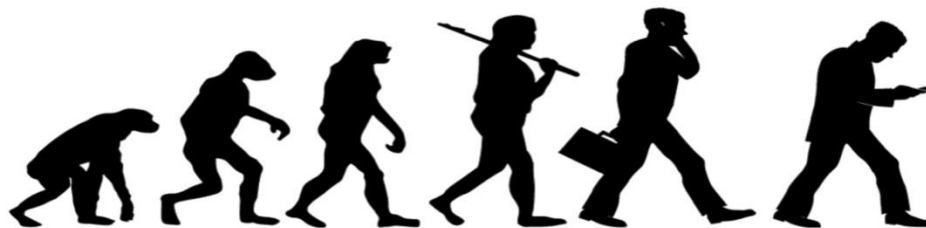

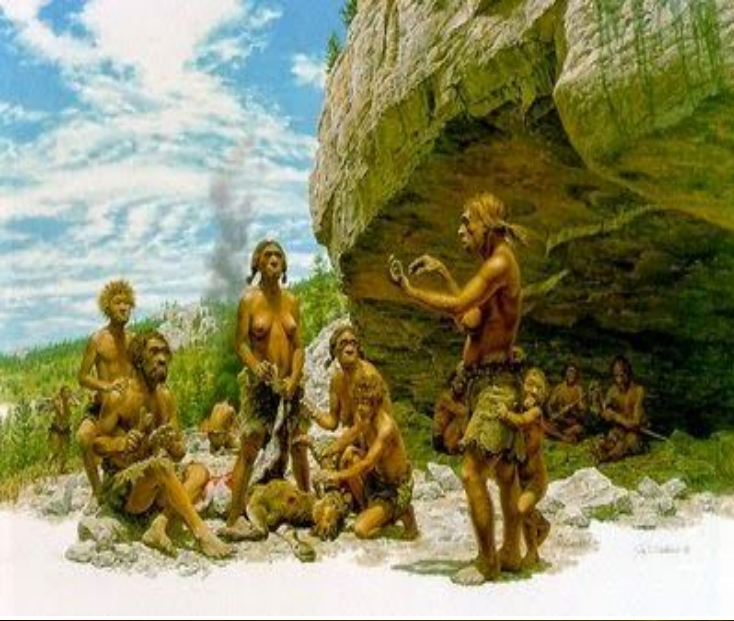

Change as an Aesthetic in Human Life

- Human evolution.
- Changes in phases of human life.
- Change in thought, emotions & expressions.
- Change in societal relations, political system, etc.

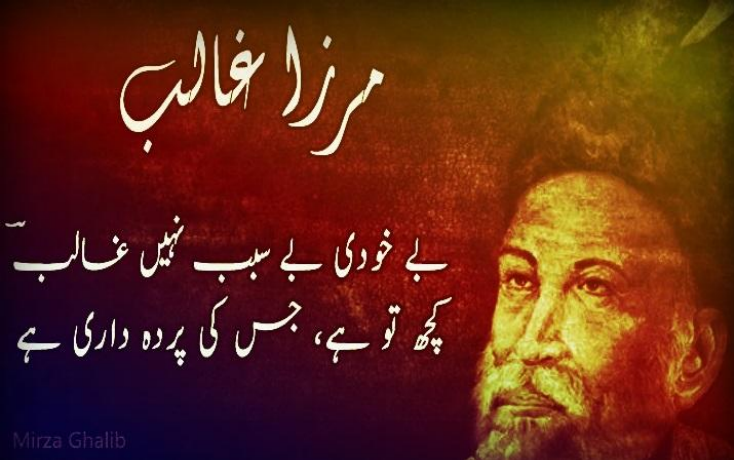

**“Your life can never get better by chance,
it gets better by change.”**

Evolution of Language :An Aesthetic

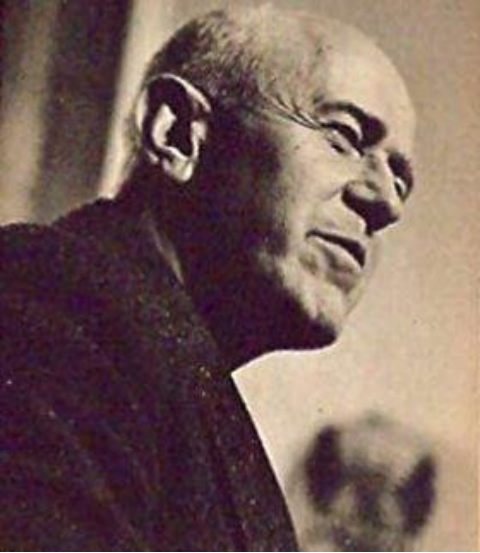

- ❑ Evolution of language (historically).
- ❑ Evolution of language in India.

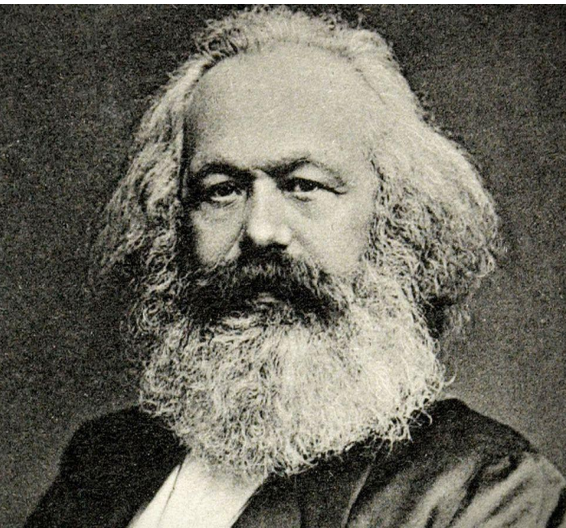

Change in Nature as an Aesthetic

- ❑ The beauty of nature can have a profound effect upon our senses.
- ❑ River
 - ❑ Not static but constantly changing.
 - ❑ Every moment is unique.
- ❑ Season
 - ❑ Beauty is in the whole process.
 - ❑ This change symbolizes eternity, strength and protection.

Change in Technology as an Aesthetic

- ❑ Changes from past till now.
- ❑ How technology changes after 20th century.
- ❑ Karl Marx & W. F. Ogburn

Interview 2

Interview 3

CONCLUSION

Change is the only constant that we can observe in our day to day life starting from technology, nature, language to human beings and the whole universe. Our aim for this project was to give arguments to prove that no matter how frightening 'change' seems; it has an aesthetic value as well.

QUESTION ROUND

Q 1. The technology as we see today is advancing but it is also making us lazy. In other words is it not taking over our lives?

Answer- The reason technology came into existence in the first place was because we stepped out of our comfort zones and started to think outside the box. It is said that a coin has two sides, it is true that technology has a negative side to it but whether it makes us lazy or not is something which is totally dependent on us. But it sure has made our lives more convenient. For instance we have read about a few cases where surgeries performed by Robots who lend a helping that can autonomously maneuver through sensitive nooks and crannies inside the human body. It can be said that in the operating room of the future, Robots will be an integral part of the surgical team, working alongside human surgeons to make surgeries safer, faster, more precise and more automated.

QUESTION ROUND

Q 2. It is said that “Robots will govern us one day”.What do you have to say about that?

Answer- It is something that has not yet happened. It is just a mere possibility. At the moment we are a long way off the sci-fi doomsday scenario as we see in the movies. The debate that Robots will take over the world wouldn't be the technology's fault, but how the people used it. We have learned and are still learning that we need to look at all possible outcomes before we add a new technology which could lead to such a thing.
