

For the paper Critical Thinking which is a skill enhancement paper, students are required to make projects/ presentations followed by discussion. This paper enables students to develop their thinking skills and take decisions in difficult and paradoxical situations. Students by being involved in discussions and case studies try to come up with logical reasoning and arguments rather than just succumbing to given situations and ideas. It helps them to reflect on their capacity to think clearly and critically. This paper also helps them to deal with their real-life situations, to create vision and plan not only for their present but also future situations.
