TIME: 1:30 – 3:30 PM
VENUE: Room 127
ATTENDED BY: 50 students
By Ms. Anjali Singhal, Trainer, NIIT

Event Report

Build Your First Professional Portfolio Website Using HTML & CSS

(Hands-On Workshop)

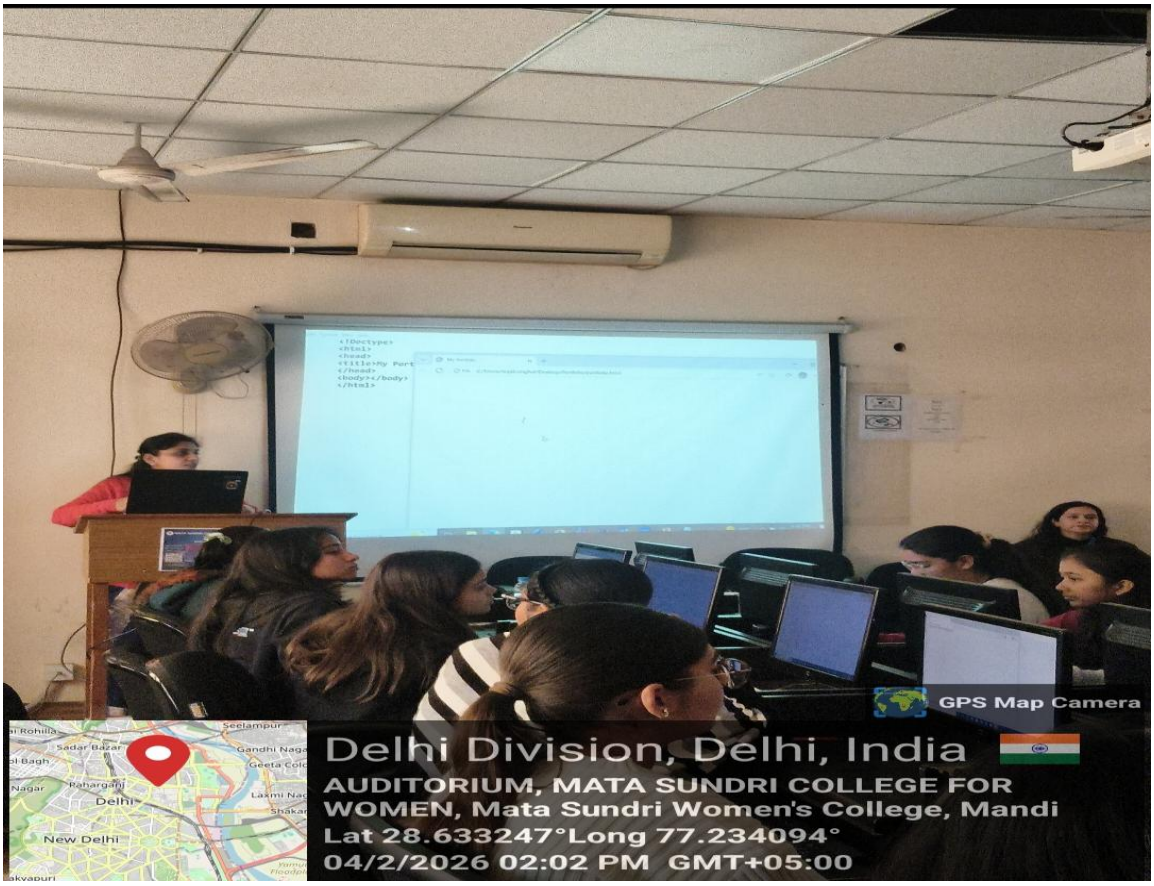

A workshop on **"Build Your First Professional Portfolio Website Using HTML & CSS (Hands-On Workshop)"** was organized in collaboration with NIIT and conducted in Room 127, with 50 students in attendance. The session focused on introducing students to the basics of HTML and CSS while highlighting the importance of building a professional digital portfolio in today's technology-driven industry.

The session was led by **Ms. Anjali Singhal, a Java Full Stack professional** with over 16 years of experience in software training and development. She began by explaining the shift from traditional resumes to digital portfolios, emphasizing how online portfolios allow students to showcase their practical skills, creativity, and projects more effectively to recruiters.

Students were taught the fundamentals of HTML, including the basic structure of a webpage and commonly used tags such as headings, paragraphs, images, and lists. They also learned the basics of CSS, including how to apply colors, fonts, spacing, and layouts, with emphasis on using external CSS for better organization and professional styling.

In the hands-on segment, students created a simple “About Me” portfolio webpage with structured sections like About Me, Skills, Projects, and Contact, and applied CSS to enhance its appearance. The workshop concluded with guidance on improving, expanding, and hosting their portfolios online, motivating students to build a strong digital presence for future career opportunities.
